YOUR BITCOINS, WHENEVER, WHEREVER AND HOWEVER YOU WANT THEM

Lux Ant Digital S.L. designs and manufactures ATMs for selling and purchasing Bitcoins and others Altcoins.

Hardware is designed and manufactured at our facilities in Gijón (Asturias, Spain), and software is developed at our principal headquarters.

Additionally, we are developing a payment gateway that will allow to accept Bitcoin as payment both in physical locations and online. This feature provides your business with a high added value.

At this time we offer two types of ATMs that incorporate the highest technological advances, both in terms of physical security against theft and IT security. They di er in their appearance, but their software functionality and note processing capacity are identical. The two models available and their prices are described below:

A BANK

ATM B01

▸ **Main unit: 6600€**

▸ **Support (optional): 600€**

* + taxes + shipping cost

TECHNICAL SPECIFICATIONS

- 15'' touchscreen

- Computer with dual-core Intel microprocessor (4Gb RAM)

- Linux operating system

- Banknote recycler (capacity 80 notes)

- Banknote deposit (capacity 500 notes)

- Dimensions: 145x67x65cm

- Sheet steel housing (3mm)

- Approximate weight: 120kg

ⒶBANK

ATM E01

▸ **Main unit with discount (until December 31, 2018): 8800€**

▸ **Main unit without discount: 10000€**

* +taxes + shipping cost

TECHNICAL SPECIFICATIONS

- 19'' touchscreen

- Computer with dual-core Intel microprocessor (4Gb RAM)

- Linux operating system

- Banknote recycler (capacity 80 notes)

- Banknote deposit (capacity 500 notes)

- Dimensions: 153x52x46 cm

- Sheet steel housing (2 mm)

- Approximate weight: 105kg

A BANK

Estimated lead time from the moment of order placement until shipping is about 60 days. We often have stock, which helps reduce delivery time, but the availability is not guaranteed.

According to our company policy we do not grant exclusive rights for our products to any distributor.

Our ATMs possess a two-way banknote recycler that allows users to obtain Bitcoins in exchange for their cash as well as redeem their Bitcoins for banknotes. This recycler accepts and dispenses banknotes of all major currencies.

You will need to indicate your desired currency / the currency of the country where the ATM will be used in order for us to configure your recycler accordingly.

The returns of the business are based on the transaction margins applied to Bitcoin exchange operations. The average comission charged by Bitcoin ATM manufacturers and operators globally is about 6%. However you can configure the system to charge the percentage you deem appropriate for you.

At this time our ATMs are not autonomous; their operating model is based on a client-server IT architecture. The ATMs are client devices that send and receive orders to and from a central server operated by Lux Ant Digital SL. The cost of this service is 1% of the price of each transaction and includes continuous monitoring, software updates and second-level user support.

An advanced telematic system allows configuration, administration and monitoring of our ATMs from anywhere on the Internet with the highest possible IT security guarantee.

This allows us to manage all the ATMs remotely and connect to them at any time in order to be able to repair any functional anomaly.

If you purchase more than one ATM, all of them will share one Bitcoin or cryptocurrency wallet, which eliminates the trouble of having to look up balances in each one of them.

At present we are developing a new functionality that will
make it possible to personalize margins of operations: you will
be able to o er your clients variable transaction prices depending on
the volume or any other parameter with the help of a system of
coupons based on Qr codes.

In the short term we will also develop an autonomous version of the
ATM software that will enable its operation without the central server.
This will save you the cost of using the server in exchange for losing
the more advanced functionalities of our system (software updates,
remote administration, monitoring, shared wallet and coupons).
